## To whom it may concern,

Valeria Sergienko was employed by Jonas Wagell Design & Architecture as a product design intern from August 17 to December 14, 2015. She has worked with various assignments both independently and as a member of a small team.

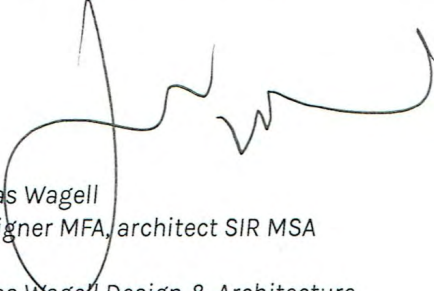

Valeria is quick to learn, hard working and has a positive attitude and easy-going manner. As well as having a keen eye for details, she is comfortable and skilled with computer software in general and 3d modelling in Solidworks in particular, which she clearly has demonstrated in the work with many new projects for Danish clients. Furthermore, Valeria has shown great skills in making quick mock-ups and models in paper and cardboard, but she has also developed full-scale prototypes.

A list of projects and tasks during the four months internship period includes:

- Steel tube chair for Danish client - Mockup of cardboard and plastic tubes/technical 3d drawings
- Wood chair and lounge chair for American client - Mockup of cardboard/technical 3d drawings
- Upholstered pouf for Danish client - Sewing of mockup and full-scale prototype/2d drawings
- Table lamp for American client - Technical 3d drawings and specifications
- Candle holders for Danish client - 3d printing of mockup in PLA plastic/technical 3d drawing
- Figurine object for Danish client - Building of 3d model/3d printing of mockup/technical 3d drawing
- Tea light holder for Danish client - Alternative mockups in paper/2d production drawings
- Modular sofa range for Swedish client - 3d modelling and creating of visuals for presentation
- Various other projects - Developing of technical 3d drawings and mockups incl photo shoot/image retouch for presentation material and more

Valeria has delivered strong work from technical drawings and specifications, to fabrication of prototypes and models, therefore I recommend her for employment without reservation.
